

CCN-Enteral & Tube Feeding Nutrition Programme

Ensuring complete, safe, and life-sustaining nutrition for patients unable to eat orally, this program provides specialized medical therapy through expertly managed tube feeding protocols.

Why Enteral Nutrition is Critical- Its not about Calories , its about nutritonal needs

Enteral nutrition is a critical medical therapy, guided by Krause's principles, to provide complete, safe, and life-sustaining nutrition. It's essential for patients unable to eat orally, preventing malnutrition and complications through specialized tube feeding protocols.

Essential for Patients with:

Neurological Conditions & Dysphagia

Stroke, neurological disorders, and elderly patients with swallowing difficulties benefit from precise nutritional support.

Critical Care & Trauma

ICU patients, trauma victims, and burn patients require controlled feeding to support recovery and prevent complications.

Oncology & GI Recovery

Patients recovering from cancer treatments, head/neck surgery, or severe GI disorders receive vital

Precise preparation and administration of enteral formula are key to effective nutritional therapy.

A collaborative healthcare team ensures optimal planning and delivery of enteral care.

Comprehensive Enteral Nutrition Care Services

Clinical Assessment

Complete evaluation of tube type, clinical condition, feeding risks, calorie needs, fluid requirements, and GI function by specialised dietitians.

Customised Nutrition Plan

Disease-specific formula composition, macro & micronutrient balancing, and modular additions tailored to individual clinical needs.

Feeding Schedule Design

Bolus, intermittent, continuous, or cyclic feeding protocols with advancement schedules and flush protocols to prevent blockages.

Tolerance Monitoring

Regular assessment of gastric residual volume, nausea, bloating, stool patterns, hydration status, and daily WhatsApp guidance for caregivers.

Safety & Hospital Support

ICU feeding guidelines, infection prevention, nurse training, formula hygiene audits, and seamless transition from hospital to home feeding.

Supplement Planning

Protein modules, MCT oil, fibre additions, strain-specific probiotics, and micronutrient support as clinically indicated.

Enteral Nutrition Programme Packages

3-Month Programme — Stabilise & Recover

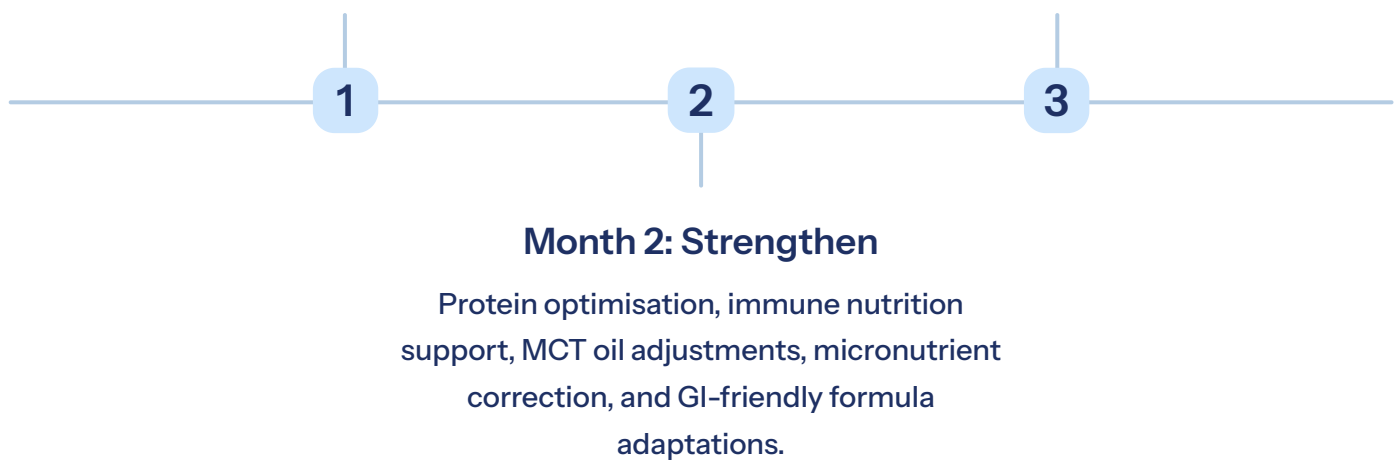

Ideal for short-term feeding: stroke recovery, post-surgery, ICU discharge, or temporary dysphagia.

Month 1: Stabilise

Safe feeding initiation, formula selection, tolerance monitoring, rate advancement, and tube care training with 4 consultations and daily support.

Month 3: Transition

Gradual move to oral diet with soft food planning, swallowing evaluation, caregiver training, and final nutrition status report.

Month 2: Strengthen

Protein optimisation, immune nutrition support, MCT oil adjustments, micronutrient correction, and GI-friendly formula adaptations.

6-Month Advanced Programme — Long-Term Care

Ideal for long-term tube feeding, neurological patients, cancer recovery, or complex ICU cases requiring extended nutritional management.

01	02	03
Phase 1 (Months 1-2): Stabilise & Protect	Phase 2 (Months 3-4): Strength & Healing	Phase 3 (Months 5-6): Long-Term Management
Safe feeding initiation, tolerance monitoring, fluid-electrolyte stabilisation, micronutrient restoration, and infection control measures.	High-protein formula planning, immunonutrition with arginine and omega-3, fibre modifications, bone health support, and swallowing rehabilitation.	Chronic feeding optimisation, simplified caregiver protocols, oral transition diet planning, and comprehensive 6-month nutrition summary with home feeding plan.

Why Choose CCN for Enteral Nutrition?

- Specialised tube feeding dietitians
- Complete enteral nutrition planning
- Daily caregiver and nurse support
- Homemade or medical formula options
